EQUIPMENT LIST AND MOTION PROCESS DESCRIPTION

设备组成及动作过程描述

The flying saw cuts the steel pipe, conveys it from the roller table, and flips the material on both sides. The waste pipe is signaled by the flying saw and removed to the waste side. The finished pipe is running normally, and turned to the side of the baler. Packaged, no detection function.

飞锯切断钢管，自辊道输送过来，两侧翻料，废品管由飞锯给出信号，剔除到废品一侧，成品管正常运行，翻至打包机一侧，打包机只负责成品管的打包，不具有检测功能。

1. Feed counting device: the steel pipes are fetched and counted one by one, and then one end is aligned and moved to the waiting area;

2. Mechanical fork arm type automatic palletizer: put the whole layer of steel pipes after counting into the lifting material frame (Note: steel pipes with diameters less than 32 need manual palletizing.);

3. Receiving and moving trolley: move the whole package of steel pipes out of the stacking station;

4. Strapping machine: hand-held strapping machine, manual strapping and lifting;

5. Hydraulic and electric control: provide power for the equipment and control the equipment through the program;

6. Conversion of square tubes and round tubes: Manually adjust the position of the arm of the material receiving frame to meet the requirements of different package shapes of hexagons and quadrilaterals; at the same time, the control panel can switch between round tubes and square tubes. In this way, the switch between round tube and square tube can be achieved.

1. 取料计数装置:钢管逐根取料、计数,然后一端对齐并移至待料区;

2. 机械叉臂式自动码垛机:将计数完成后的整层钢管码放至升降料框内(注意:直径小于32的钢管需要人工辅助码垛。);

3. 接料横移小车:将整包钢管移出码垛工位;

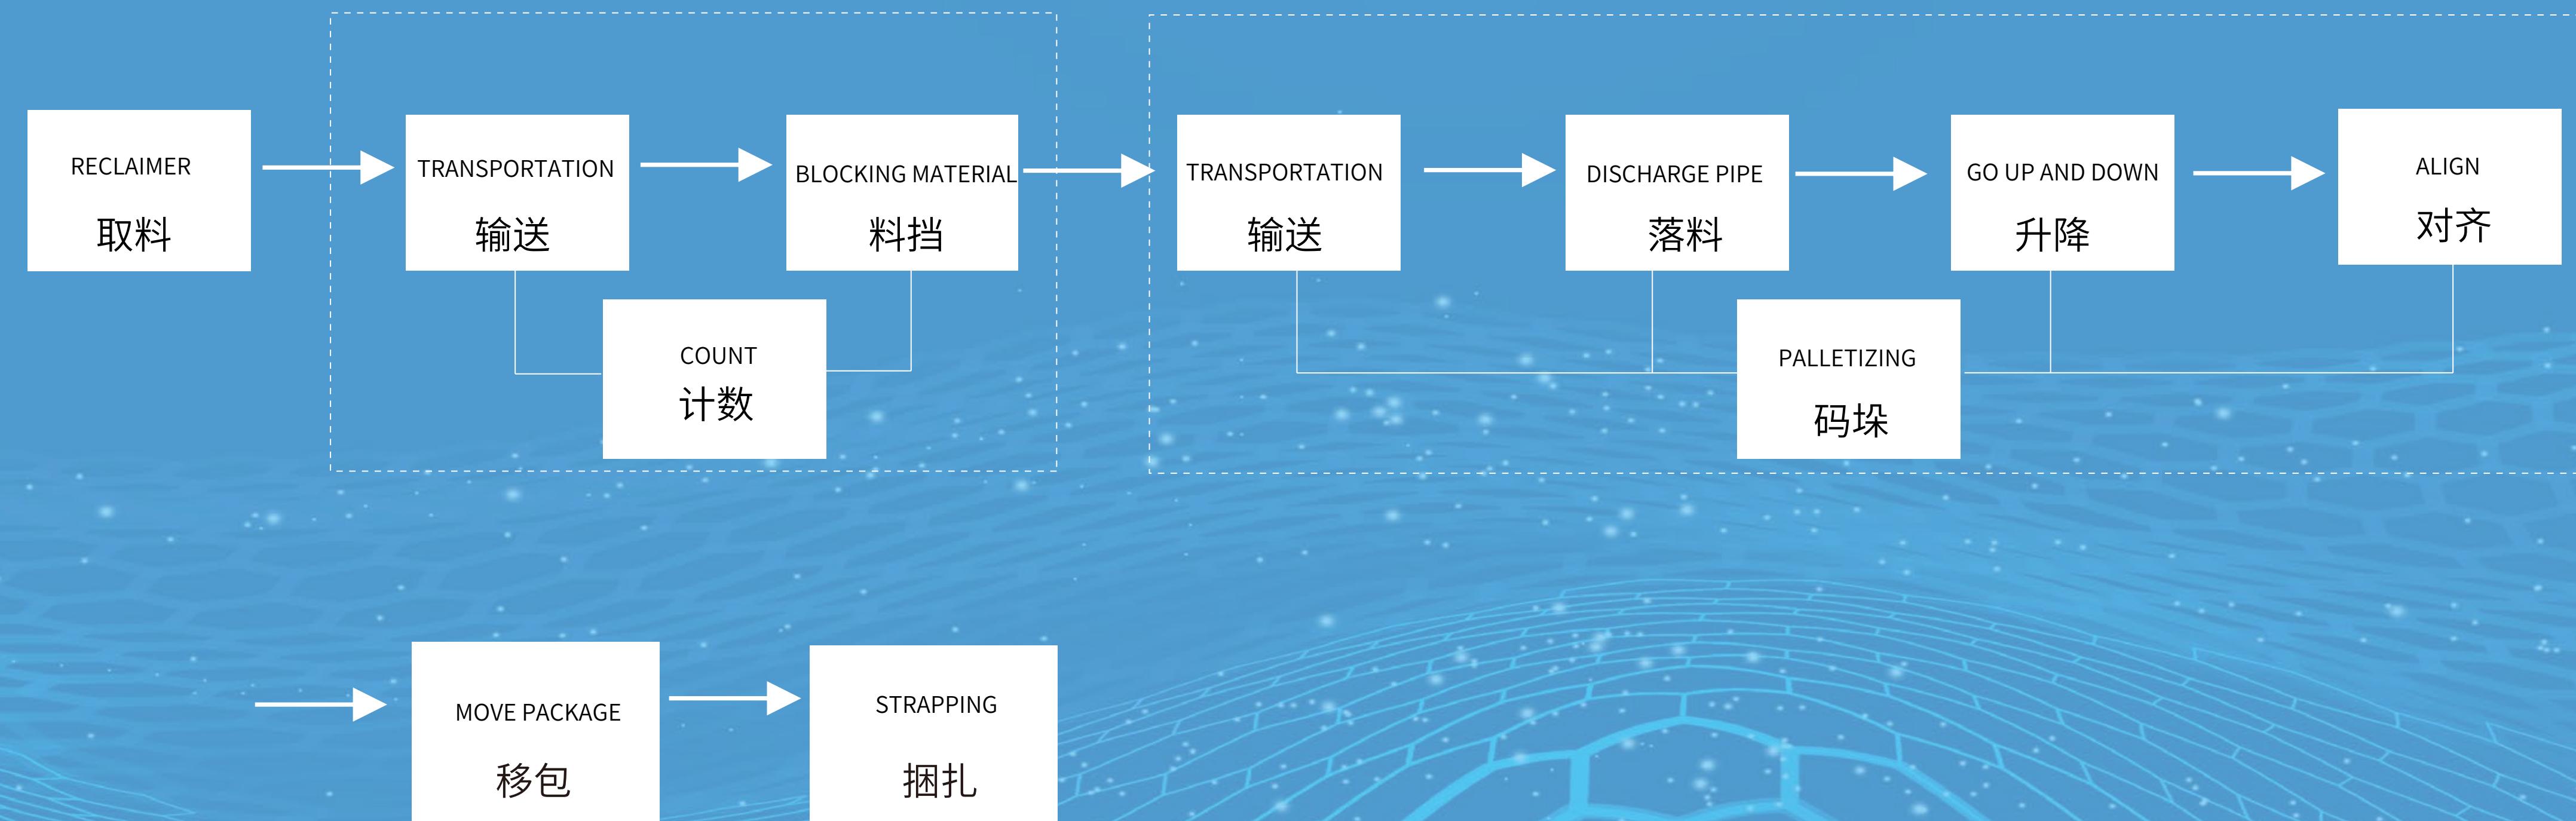

4. 捆扎机:手持式捆扎机,人工完成捆扎,吊运;

5. 液压、电控:为设备提供动力,通过程序控制设备;

6. 方管、圆管的转换:人工调整接料料框挡臂的位置,以满足六边形、四边形不同包型的要求;同时控制面板上在圆管、方管之间相互转换。如此即可达到圆管、方管之间的切换。
